Welcome to ACDSee Video Converter

ACDSee Video Converter is a simple-to-use HD video converter that can convert video files between most popular media formats at high quality and speed. Its smart video aspect ratio algorithm helps you get rid of distracting black borders and make full use of your mobile media player screen. You can also use it to extract your favorite MP3 audio from downloaded video files.

Set and Forget

Designed to be used with your mobile media player, ACDSee Video Converter lets you create a to-do list of videos to convert, and set the program to shut down after conversion is completed, or pause/re-start the conversion at your convenience.

Convert Videos and Audio Among All Popular File Formats

Convert between all kinds of video and audio formats, including AVI, MP4, MKV, FLV, 3GP, 3G2, WMV, MOV, VOB, MPG, PSP, M4V, VCD, DVD, ARM, ASF, AVS, SWF, MPEG, MTV, OGG, H261, H263, H264, MP3 and more. See a complete list of [supported formats and devices](#).

Adding and Converting Videos

You can queue a list of files to be converted to a number of different file types to be played on a variety of devices.

Adding Files to the Input Video List

You can add files to the Input Video List in preparation for conversion.

To Add Files:

1. Click the **Add Video Files...** button.
To add a folder, select **Add Folder...** from the drop-down menu.
2. Select one or more files from the **Add Video Files** dialog box. Use **CTRL + click** to select multiple files.
Press **Open**.

CPU Performance Graphic:

At the bottom of the window, you will see a CPU performance graphic. This reflects the current usage of your CPU and will help you decide if your CPU has the resources required for converting videos.

If You Have an NVIDIA Graphics Card That Supports [CUDA](#):

If you have an NVIDIA graphics card that supports CUDA, you can select it to handle your conversion, thereby freeing up your CPU for other tasks. Select to use your NVIDIA graphics card by clicking the CUDA graphic on the left side. You can also make this change on the Performance tab of the [Options](#) dialog.

Please note that if your video card does not support CUDA, this option will be disabled.

Convert One or More Videos to a Different Format

After you have added your files to the Input Video List, you can convert them to a wide variety of formats.

To Convert Videos:

1. Select the video you would like to convert. If you would like to select multiple files, do one of the following:
 - Drag your cursor over the files.
 - Press **CTRL** while clicking the specific files you want.

2. Your files display an icon of their current format. Ex.) Click this icon to open the **Choose Format** dialog box. Configure your format settings as described in the table below.

Choose Format Dialog Box

	Output Type	Select the output type you would like to convert your files to from the drop-down menu according to the device you would like to play your video on.
	Output Format	Select the specific device from the drop-down menu of options available for the output type you selected. Next, select from the drop-down menu of parameters for that device.
	Format Details	<p>This section displays the format details of the output you have selected, including:</p> <ul style="list-style-type: none"> • Video Frame Size • Video Bitrate • Video Codec • Audio Codec • File Format <p>This section also includes the Detailed Settings button. Click the Detailed Settings button and configure the options as described in the Detailed Settings Dialog Box table below.</p>
Split	Split By	<p>If you would like to split your video, check the Split By checkbox and select whether you would like to split your video by:</p> <ul style="list-style-type: none"> • Size (in MB) <p>or</p> <ul style="list-style-type: none"> • Time (in minutes)
	Apply to all	Check this box to apply the above settings to all of the files in the Input Video List.

- Once a new Output Type has been selected, the Detailed Settings button becomes enabled. Click the **Detailed Settings** button to alter additional video and audio parameters.

Changes made within the **Detailed Settings** dialog can be saved as a [User-Defined Profile](#).

Detailed Settings Dialog Box

	Format	
Video Parameters	Codec	Video codec specifies the type of video data compression you would like ACDSee Video Converter to use.
	Size	Select the video image size.
	Bitrate	Select the bitrate to determine how much data will go to the screen per second on playback. A higher bitrate allows for a higher quality picture, however, it also increases the file size.
	Frame Rate	Select the frame rate to determine how quickly the picture refreshes.
Audio Parameters	Codec	Codec specifies the type of audio data compression you would like ACDSee Video Converter to use.
	Sample Rate	Sampling describes the data rate of a sound recording. A higher sample rate allows for higher quality sound, however it also increases the file size.

Channel	From the drop-down menu, select 1 to have the same sound come out of the left and right speakers, or, 2 , to have different sound come out of the left speaker versus the right.
Bitrate	Select the bitrate to determine how much audio data will go to the speakers per second on playback. A higher bitrate allows for a higher quality sound, however, it also increases the file size.

4. Click **OK** to close the Detailed Settings dialog box.
5. Click **OK** to close the Choose Format dialog box.
6. To specify further conversion and completion settings, such as setting where your completed files should be placed, see [Setting the ACDSee Video Converter Options](#).

7. Click the **Convert** button to begin the conversion.

Once converted, you can locate the output video by right-clicking the file and selecting **Locate Output Video**.

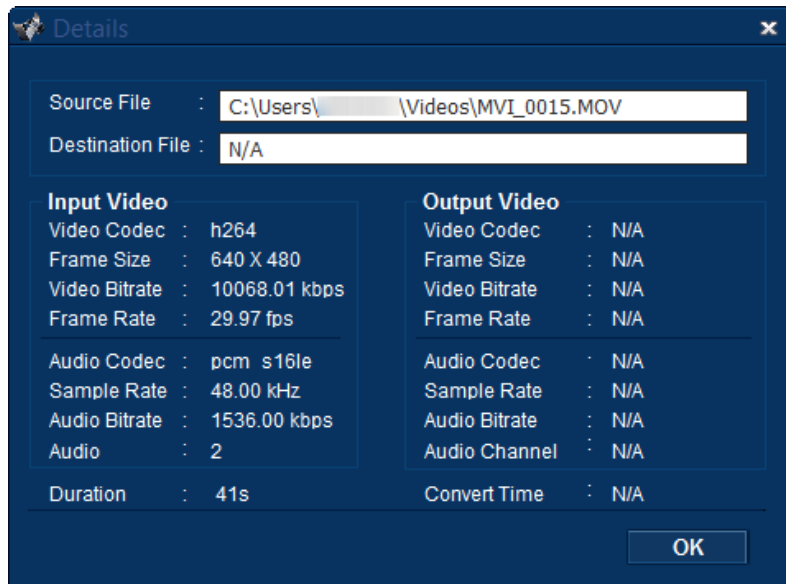

ACDSee Video Converter converts all files in the Input Video List. If you have converted a file and then add another file to convert, remove the previously converted file from the list, unless you would like to convert it to another format.

Viewing Video Details

To View the Details of an Added Video File:

- Right-click the file in the Input Video list and select the **Details** option.
The details of the Input and Output video are displayed.

Saving Detailed Settings

Changes made within the Detailed Settings dialog can be saved as a User Defined profile.

To Save the Detailed Settings as a User Defined Profile:

1. Click the **Detailed Settings** button (if enabled).
2. Modify the settings.
3. Click **OK**.
4. In the confirmation dialog that appears, click **OK**.
5. Enter the name for the profile and click **OK**.

To Select Your Saved Detailed Settings:

1. From the Main window, click the **Choose Format** button. Ex.)
2. Click the **Output Type** drop-down arrow and select the **User Defined** option.
3. From the Output Format drop-down, select your desired User Defined profile.
4. Click **OK**.

Viewing the Conversion Log

After a file is converted, a log of the conversion details is generated. You can view the information and click the **OK** button to close the window.

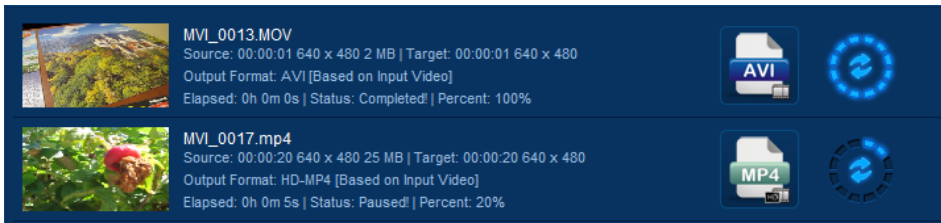

You can view the conversion log at any time.

To View the Conversion Log:

- From the Main window, click **Tools** and select **Conversion Log**.

Stopping Video Conversion

While the file is converting, a progress spinner is displayed around the Convert button, as seen below.

To Cancel the Conversion:

- Click the **Stop** button, found to the right of the Convert button:

You can then choose to convert your file to another format, or remove it from the list and add another video file.

Right-click a file to view the context-menu.

Removing Files from the Input Video List

You can remove files that have been added to the Input Video list.

To Remove Files, Do One of the Following:

- Select one or more files and click the **Remove** button.
- Right-click the file and select the **Remove** option.

Setting the ACDSee Video Converter Options

Settings include options you can configure to customize and automate ACDSee Video Converter's functionality.

After making changes, you have the option of returning to the original default settings.

To View the Options and Make Changes:

- From the Main window, click **Tools | Options**.
You can view and change the settings as described in the table below.

To Save Changes and Close the Options Window:

- Click **OK**.

To Close the Options Window Without Saving Changes:

- Click **Cancel**.

To Return to the Original Default Settings:

- Click **Reset**.

The Options Dialog Box

General Tab

These settings affect the basic operations of ACDSee Video Converter.

Application Behavior

Automatically check for updates.

ACDSee Video Converter will automatically ensure that you are running the latest version.

When exiting, prompt will show if it's still executing.

ACDSee Video Converter will warn you if you are trying to close the application while an action is still being performed, such as burning a DVD or converting a video.

Show <Getting Started Guide> on startup.

This displays the Getting Started instructions in the Main Window each time you open the application.

Prompt when removing tasks.

When you remove files from the Input Video List, ACDSee Video Converter double checks that you want to continue this action.

Prompt when adding unsupported files.

ACDSee Video Converter will notify you when you are trying to add files to the Input Video List that are not supported by the program.

Conversion Tab

This tab includes options for converting your videos.

Video Aspect Ratio

Aspect ratio is the ratio of the width of the video to its height.

Keep input video aspect ratio.

When trying to convert a file with an inconsistent input video and output video size, ACDSee Video Converter will maintain the aspect ratio of the video zoom. In other words, the picture will not be stretched or cropped.

Fill space around input video to fit output video aspect ratio.

When the input video and output video size are inconsistent, ACDSee Video Converter will fill the empty areas around the picture.

Automatically clip the edges of the input video to fit output video aspect ratio.

ACDSee Video Converter will clip the picture to fit the screen when the input video and output video size are inconsistent.

CPU

Executing when CPU is normal.

ACDSee Video Converter will run your conversion tasks when your computer is in normal operation mode. This may have a negative impact on how fast other programs run at the same time.

Executing when CPU is idle.

ACDSee Video Converter will run your conversion tasks when your computer is idle. This will ensure that the conversion

		process will not have a negative impact on how fast other programs run.
Performance Tab	These settings control CPU usage.	
	GPU	Graphics Processing Unit
	Enable GPU Acceleration	This option will be enabled if your computer has an NVIDIA graphics card that supports CUDA . The encoding will be processed by your NVIDIA graphics card, rather than your CPU. This will free your CPU up to run other programs quickly during the conversion process and will accelerate conversion, particularly for output videos with an H.264 encoder. Select this option to convert faster.
	Converting Quality	<ul style="list-style-type: none"> • Fast • Medium • Slow Select your video's conversion speed. The Fast setting will convert quickly, but will not preserve video quality as well as the Slow setting.
	Number of Tasks	You can select up to three concurrent conversion tasks.
Completion Tab	These settings define how the program responds after conversion is complete.	
	Conversion Completion Settings	
	Output Directory	You can select the location where you would like the converted files to be placed.
	Show notification for ... seconds when all tasks are completed.	Select how long you would like to receive notification for once your conversion tasks have been completed.
	Play sound ... when a task is completed.	Select a sound to be played as notification once your conversion tasks have been completed.
	Close ACDSee Video Converter after completing all tasks.	Check this option to have ACDSee Video Converter close when all conversion tasks have been completed.

Uploading Your Videos to YouTube®

You can upload your video content to YouTube to share privately with friends or publicly with the YouTube community.

To Upload Your Videos to YouTube:

1. Click the **Upload to YouTube** button  and fill in the fields in the **Upload** dialog box, as described in the table below.
2. Click **OK**.

3. Click the **Convert** button.  Your video will be uploaded to YouTube as soon as the progress spinner is complete. If you have opted to share your video on Facebook or Twitter, they will now open in your browser and prompt you to enter your user name and password.
4. Navigate to YouTube.com to see or share your video.

Upload Dialog Box

Upload video information	
Account	Enter your YouTube user account name. <ul style="list-style-type: none">* Add: saves your user account name.* Delete: deletes your user account name.
Password	Enter your YouTube account password.
Upload Video	Select Add File to locate the video you would like to upload.
Title	Enter a title for your video.
Description	Enter a description of your video.
Category drop-down	Select the category you would like your video to be listed under on YouTube.
Tags	Enter tags you would like to assign to your video. These tags will help to determine when your video shows up in searches on YouTube.
Private checkbox	Check the Private checkbox if you want your video to be only visible to you.
Share on Facebook checkbox	Check the Share to Facebook checkbox if you want to share your video on Facebook. After you have uploaded your video to YouTube, Facebook will open and you will be prompted to enter your Facebook user name and password.
Share on Twitter checkbox	Check the Share to Twitter checkbox if you want to share your video on Twitter. After you have uploaded your video to YouTube, Twitter will open and you will be prompted to enter your Twitter user name and password.
